

Brickwall™ Security Suite

THE POWER OF SELINUX MADE EASY

Tresys Brickwall makes using SELinux efficient and cost effective for all organizations. SELinux can now be easily managed...increasing the security posture of the entire business...and doing so without costly custom development efforts.

Security Enhanced Linux (SELinux) offers the world's most advanced operating system security technology. Its powerful, fine-grained access controls can create a "firewall for processes" to protect the integrity and confidentiality of individual applications and services. However, the complexity of using SELinux has always been a challenge. Now with the Tresys Brickwall™ Security Suite, Linux administrators can use and extend SELinux without special knowledge of SELinux's sophisticated policy language. With Tresys Brickwall the powerful SELinux security enhancements become much easier to use.

Tresys Brickwall™ Security Suite

Standard Edition

Basic functionality. Control application network access for the standard RHEL Reference Policy targets. Now available as a **free** download!

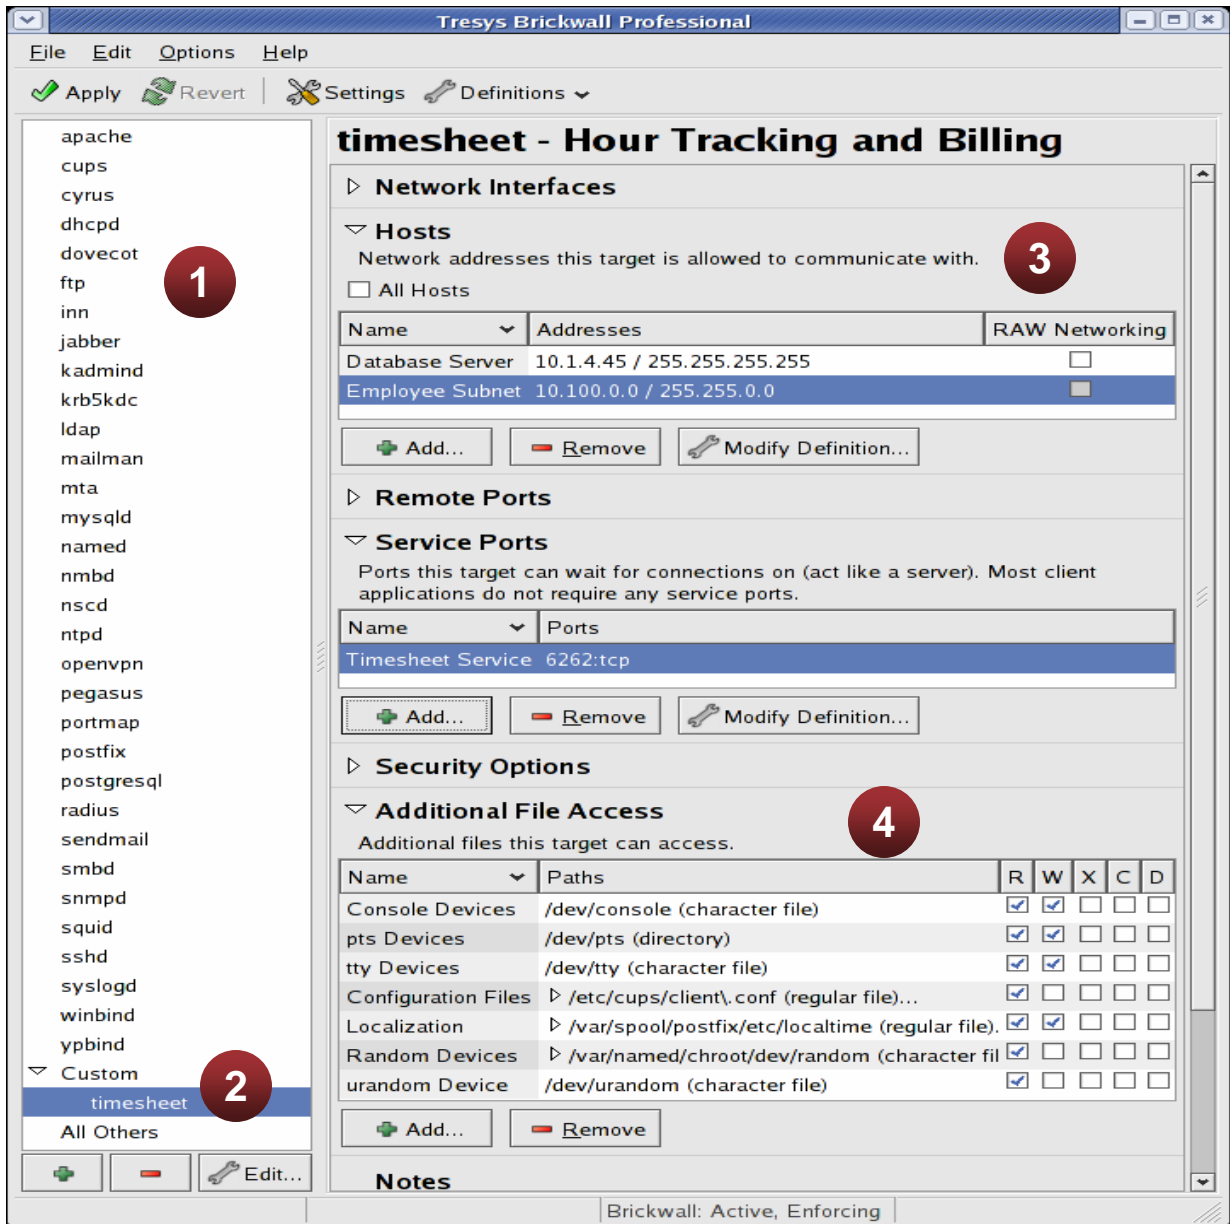

Professional Edition

Full protection for a single system. Control application network access and extend file permission for many additional targets. Create custom targets for your applications.

Enterprise Edition

Full protection for an entire **network enterprise**. Plus: Management of many SELinux systems from a central console as well as group policies for related systems, and integration with the Tresys Razor™ products.

Tresys Brickwall™ Professional Edition and Enterprise Edition Policy Editor Interface

1 Standard Edition comes with targets for many network-facing applications. Professional and Enterprise Editions adds support for many more.

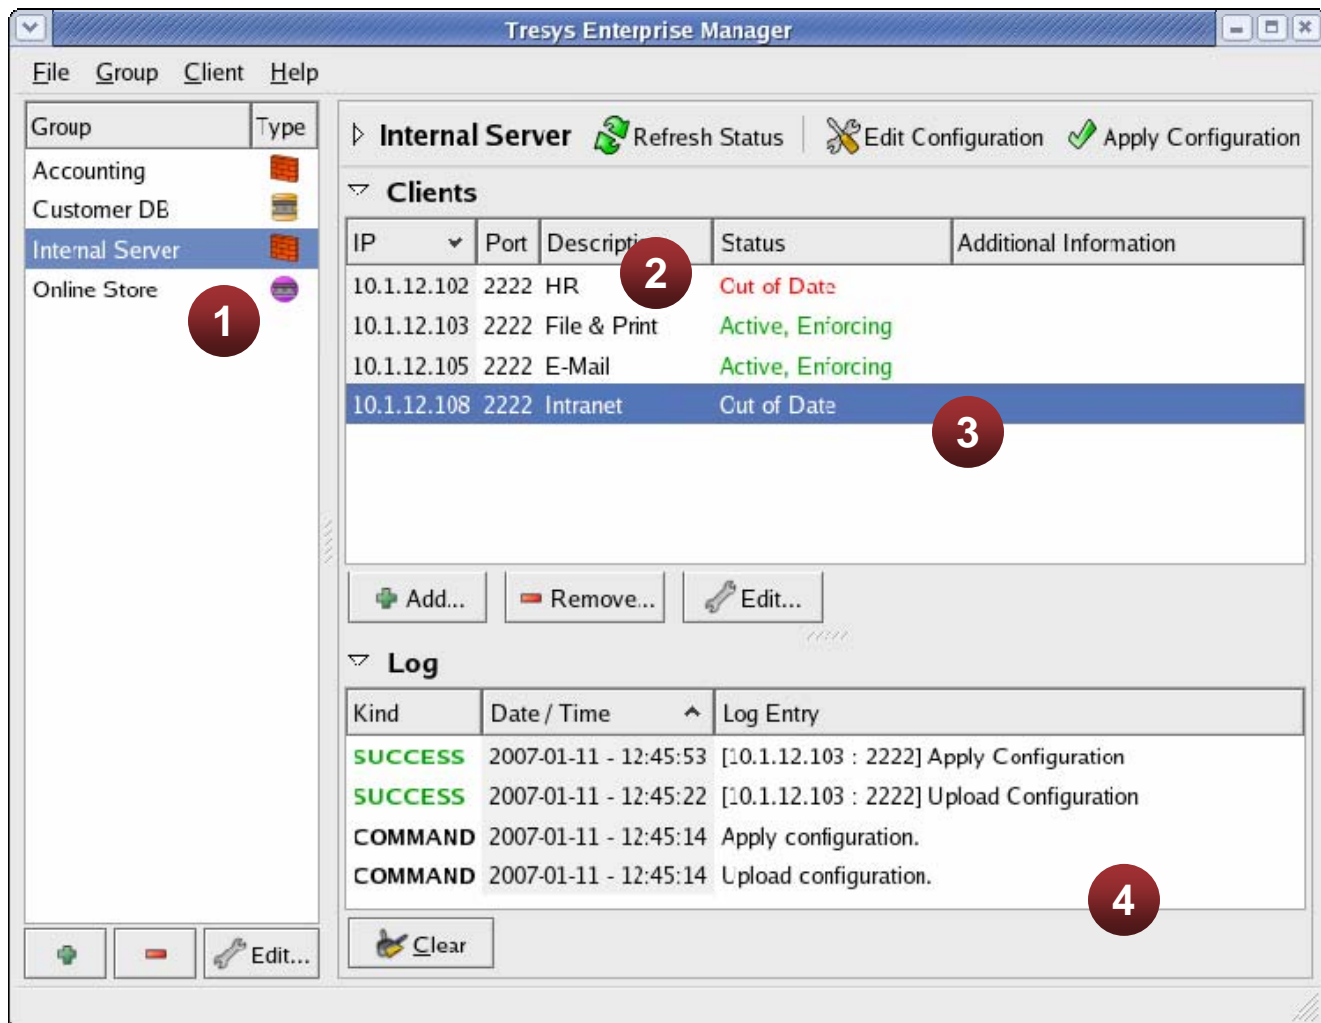

2 Professional & Enterprise allow you to add custom targets for your applications.

3 All editions control access to network resources on a per-application basis.

4 Professional & Enterprise allows custom file access at the application level.

Tresys Brickwall™ Enterprise Edition

Network Management Console

- 1 Create and manage functional groups for Brickwall and Razor clients.
- 2 Create and manage security policy for similar systems within functional groups. Manage the policy for the entire group using the same editor interface as Professional Edition.
- 3 View and update the status of the systems in each group.
- 4 Monitor detailed logs of all the configuration operations performed on each system.

Features	Standard	Professional	Enterprise
Application-level network security	✓	✓	✓
Application security options	✓	✓	✓
Built-in targets	Limited	Complete	Complete
User defined custom targets		✓	✓
File Access Extensions		✓	✓
Group policy configuration			✓
Remote management			✓
Integration with Tresys Razor products			✓

Supported Targets

Tresys Brickwall provides pre-built, customizable security configurations for many applications. Applications are commonly referred to as targets. Tresys Brickwall Professional and Enterprise editions both extend the targets available and provide even greater configurability and management capabilities.

- Standard Edition**
 Apache , BIND, DHCP, MailMan, MTA, MySQL, NIS, NSCD, NTP, Pegasus, Portmap, Postgresql, Windbind, SNMP, Squid, Syslog.
- Professional and Enterprise Editions**
 All applications identified under Standard Edition as well as CUPS, FTP, Postfix, Samba, Sendmail, SSH, Cyrus, Dovecot, INN, Jabber, Kerberos, OpenLDAP, OpenVPN, Radius, and Custom Applications.

Supported Platforms

Tresys Brickwall supports the following operating systems and hardware platforms:

- Standard Edition (RHEL4 & RHEL5) - 32 & 64 bit x86
- Professional Edition (Fedora Core 6) - 32 & 64 bit x86
- Professional & Enterprise Edition (RHEL4 & RHEL5) - 32 & 64 bit x86, P-Series

About Tresys

Tresys provides security solutions that enable customers to achieve greater success by making information technology systems more secure. The combination of acclaimed research and development prowess and practical approach to security solutions has earned the company a distinct reputation in the security market. Tresys has successfully delivered products and services that meet and exceed the needs of the most sensitive security missions, including those at defense and intelligence agencies around the world. These proven accomplishments and a continuing pursuit of thought leadership are part of a strategy that is shifting the way governments and businesses approach sensitive security issues.

Headquartered in Columbia, Maryland, Tresys clients and partners include the U.S. U.K. and Australian Departments of Defense, IBM, General Dynamics, Red Hat and Cisco.
