TRESYS NAMES GOVERNMENT IT SECURITY VETERAN AS EVP

Gary Latham Will Help Tresys Address Increasing Market Demands for Open Source and Security Across Government

Columbia, Md. – February 3, 2009 – Tresys Technology, a provider of technology and services for customers with high security requirements, today announced it has named Gary Latham as executive vice president of corporate development. Latham will leverage Tresys' outstanding position in the open source community and in the U.S. government intelligence market to meet the growing demand for open source and security services and solutions.

"Gary's understanding of complex government and security market needs and his record of making new technologies and services more accessible to customers, makes him a great addition to our team," said Craig Sutherland, CEO, Tresys Technology. "His experience and success in building teams to meet emerging demands across the U.S. government and other high-security environments will be a tremendous benefit to Tresys and its customers."

Prior to joining Tresys, Latham led EMC's Microsoft Practice in Europe, the Middle East and Africa. In that role, he built a new line of business and established a multi-national organization to drive sales and to deliver complex infrastructure and security services to customers and partners across the region. During his two year tenure, Latham grew that business from approximately \$2 million to nearly \$100 million per year through organic growth and acquisition.

Before EMC, Latham was a principal at Internosis, Inc., a highly-rated Microsoft partner and systems integrator where he was responsible for creating and managing its public sector business. Latham is credited with creating Internosis', public sector business and growing it to more than \$20M/year in two years, Internosis was acquired by EMC in 2005.

In addition to management roles including Co-founder of LaunchDogs, Inc., Director of Corporate Development for AT&T, Inc.'s Government Markets, Director of Worldwide Sales for Xcert International (now RSA Security), Director of Business Development for ManTech International and Fischer International, Latham spent five years with the U.S. Department of State as the Chief of the Information Systems Security Division. There, he was responsible for oversight of information security programs at U.S. embassies and installations worldwide.

"I can't think of a better place to be right now than at the intersection of open source technology and security," said Latham. "It let's us build better and more secure solutions which is a tremendous advantage given the pace of new threats to our critical systems. I am excited to be joining the company at a time when mainstream markets are beginning to adopt open source security solutions."

Tresys Technology

Tresys innovates and applies advanced technologies to quickly solve the needs of customers requiring agile responsiveness to security requirements. By leveraging secure open source software, our products and services support the most sensitive security missions around the world. As a result Tresys enjoys a distinct reputation for shifting the way governments and businesses approach security. For more information, visit: www.tresys.com.
