TRESYS TECHNOLOGY APPOINTS SVEN STANDAL MANAGING DIRECTOR

Former Morgan Stanley VP of Technology to Oversee Tresys' Linux Solutions Practice

Columbia, Md. – April 8, 2009 – Tresys Technology, a provider of technology and services for customers with high security requirements, today announced it has named Sven Standal managing director, Linux Solutions Practice. Standal will oversee Tresys' organizational quality and delivery performance via customer service, vendor and program management and process development initiatives.

"Tresys is committed to advancing the design and application of strong security to meet the operational goals of its customers," said Gary Latham, executive vice president of corporate development, Tresys Technology. "As more government and enterprise organizations realize the strength of open source technology, Tresys has experienced a heightened demand for its Linux-based applications. Mr. Standal is the right leader to assist Tresys in optimizing our current organizational processes to scale with this demand – while maintaining the highest level of product and service quality our customers expect and deserve."

Mr. Standal will be responsible for managing all aspects of Tresys' Linux Solutions Practice. With more than 16 years of experience in information technology, Mr. Standal's background includes functional experience in IT organizational improvement, service quality and delivery, vendor management, quality management and process development, program management and knowledge management. Prior to joining Tresys, Mr. Standal was vice president of technology at Morgan Stanley, where he managed the global information technology services and operational related activities for the company's research department. In that role, Standal was responsible for all aspects of day-to-day IT operations, including stability of the technology environment, IT service delivery, solutions integration, vendor management, resource management and financial management.

Prior to working on Wall Street, Sven was a managing principal at Internosis (a highly-rated Microsoft partner and system integrator), where he managed a \$15 million consulting division, providing outsourced productivity services to a diverse client base, including Verizon, Pfizer, Morgan Stanley and The Bank of New York. During his tenure at Internosis, Standal was also instrumental in creating the NY Metro Microsoft Infrastructure Practice and establishing the corporate quality management program that included all processes, tools, and systems.

"I joined Tresys for its core values and people, and its unique position as an industry-leader providing secure solutions while leveraging open source technology," said Standal. "I am committed to retaining this distinctive quality as we grow – while maintaining the specialized focus of Tresys' truly niche business."

About Tresys Technology

Tresys innovates and applies advanced technologies to quickly solve the needs of customers who require agility and responsiveness to meet their security requirements. Leveraging secure open source software, our products and services support the most sensitive security missions around the world. As a result Tresys enjoys a distinct reputation for shifting the way governments and businesses approach security. For more information, visit: www.tresys.com.
